Actual application UI - Administrator View

This document contains real screenshots of the AAS (Automated Accounting System) application, captured from the running system.

Table of Contents

- 1. Login Screen
- 2. Admin Dashboard
- 3. Orders Management
- 4. Vendor Operations
- 5. Branch Operations
- 6. Bills & Invoicing
- 7. Stock Management
- 8. Vendors Master Data
- 9. Items Catalog
- 10. Categories

1. Login Screen

Overview

The application login screen where administrators authenticate with their credentials.

Features

- Username field (Email or Administrator ID)
- Password field (encrypted)
- Login button
- Error handling and validation

Screenshot

Login Page - Secure authentication to access AAS

2. Admin Dashboard

Overview

The main dashboard showing operational overview with key performance indicators (KPIs) and business metrics.

Dashboard Sections

- Operational Summary - Key metrics at a glance
- Order Status - Breakdown by status
- Branch Operations - Branch-level metrics
- Bill Summary - Billing overview
- Receivables - Outstanding amounts
- Recent Activity - Latest transactions

Period: 2026-04-01 to 2026-04-02

3. Orders Management

Overview

Centralized order management interface showing all orders with status, vendor, amounts, and action buttons for managing the complete order lifecycle.

Key Features

- Order list with search and filtering
- Column visibility: Order ID, Date, Branch, Vendor, Status, Amount, Actions
- Status indicators (color-coded)
- Action buttons: Manage, View, Edit, Delete
- Order detail panel on selection

Screenshot

Orders Management - Browse and manage all orders

4. Vendor Operations

Overview

Vendor-centric operational dashboard with performance metrics, pending orders, PDF receipt status, bill capture status, and financial settlement tracking.

Dashboard Metrics

- Total vendors count
- Pending orders by vendor
- Awaiting PDF uploads
- Awaiting bill capture
- Pending amounts
- Settlement status (Settled/Open/Overdue)
- Last activity timestamps

Screenshot

Vendor Operations - Monitor vendor performance and pending items

5. Branch Operations

Overview

Branch-centric operational dashboard tracking order pipelines, outstanding receivables, payment collection rates, and financial settlement by branch.

Dashboard Metrics

- Total branches count
- Branches with pending orders
- Total pending orders
- Awaiting vendor assignment
- Open receivable amounts
- Payment collection rates
- Ledger balances

Branch Operations - Track branch receivables and performance

6. Bills & Invoicing

Overview

Complete billing and invoicing system for managing customer invoices, recording payments, tracking outstanding amounts, and downloading invoice PDFs.

Key Features

- Invoice list with status tracking
- Create invoices from orders or manually
- Record payment transactions
- GST and tax management
- Outstanding amount tracking
- Payment status indicators
- PDF download capability

Screenshot

Bills & Invoicing - Manage invoices and payments

7. Stock Management

Overview

Real-time inventory tracking system with low-stock alerting, threshold management, and vendor grouping for comprehensive inventory control.

Features

- Item inventory with quantities on hand
- Per-item reorder thresholds
- Low stock status indicators
- Vendor-wise inventory grouping
- Summary metrics (total items, quantity, low stock count)
- Stock alerts and notifications

8. Vendors Master Data

Overview

Supplier management system for maintaining vendor records, contact information, payment terms, and invoice template setup for PDF parsing.

Features

- Vendor list with search
- Create/edit vendor records
- Contact information (name, email, phone, address)
- Payment terms and credit days
- Invoice template management
- Vendor categorization

Screenshot

Vendors Master Data - Manage supplier information

9. Items Catalog

Overview

Central product catalog with pricing, GST rates, vendor associations, and category management for comprehensive item master data.

Features

- Item code and description
- Category assignment
- Cost and selling rates
- GST rate configuration
- Vendor association
- Search and filter by category/vendor
- Create/edit/delete items

Screenshot

Items Catalog - Manage product master data

10. Categories

Overview

Item categorization system for organizing products into logical groups for easier browsing, filtering, and management across the system.

Features

- Category list with descriptions
- Create new categories
- Edit category details
- Assign items to categories
- Category-based filtering in orders

Screenshot

Categories - Organize items into logical groups

Key Workflows

Workflow 1: Complete Order-to-Invoice-to-Payment Cycle

- 1. Create Order (from orders list or by uploading order sheets)
- 2. Assign Vendor to Order
- 3. Upload Vendor PDF and Bill Details
- 4. Create Sell Order (confirms purchase)
- 5. Create Invoice from Order (auto-populated data)
- 6. Record Payment (with allocation to invoice)
- 7. View Ledger and Settlement Status

Workflow 2: Vendor Performance Monitoring

- 1. View Vendor Operations Dashboard
- 2. Identify vendors with pending orders or issues
- 3. Click vendor for detailed drill-down
- 4. Review vendor orders, ledger, and exceptions
- 5. Export vendor ledger to CSV for analysis
- 6. Follow up on overdue PDFs or bill captures

Workflow 3: Branch Receivables Management

- 1. View Branch Operations Dashboard
- 2. Monitor pending orders and open receivables by branch
- 3. Review payment collection rates
- 4. Click branch for detailed financial view
- 5. Track overdue invoices and exceptions
- 6. Record payments and update ledger

Workflow 4: Inventory Management

- 1. Monitor Stock Management dashboard
- 2. Set reorder thresholds for items
- 3. Receive low-stock alerts
- 4. View inventory by vendor
- 5. Create orders to replenish stock
- 6. Track stock receipt through order cycle

About AAS

AAS (Automated Accounting System) is a comprehensive procurement, inventory, and finance management platform designed for multi-branch businesses.

Key Features:

- Multi-branch order management
- Vendor operations tracking
- Branch receivables management
- Automated invoicing with GST support
- Payment allocation and tracking
- Real-time inventory monitoring
- Comprehensive reporting and analytics
- Role-based access control
- AI-powered PDF parsing for vendor invoices

Integration: ERPNext backend ensures complete financial compliance and audit trails.
